PRESS RELEASE

Auconet BICS becomes Infraray BICS

Multi-talent for network visibility and management of large IT infrastructures

Berlin, March 14, 2023. Founded in 1998 by a German engineering team with long experience in IT operations management, Auconet has successfully implemented numerous projects for medium-sized and large companies in recent years, including Deutsche Bahn, Berliner Wasserbetriebe, Rewe Retail and Finanz Informatik. Its core business is solutions for network management, security and automation, IT infrastructure management and the control of the complete business infrastructure. Now the software manufacturer is opening a new chapter with the renaming of its software suite from Auconet BICS to Infraray BICS.

With Infraray BICS, the company - part of the Beta Systems Group since 2018 - has created a highly scalable multi-functional tool for network visibility and management of large IT infrastructures. Like X-ray vision, BICS illuminates IT infrastructures down to the lowest level, creating the conditions for control and security. This unique product characteristic will be manifested even more in the new product and company name Infraray in the future.

"The renaming reflects exactly what our technology is all about," says Hartmut Bolten, Managing Director of Infraray. Infraray BICS addresses IT infrastructure from top to bottom, scanning, visualizing and securing them from a central user interface. The software is highly scalable for networks from the smallest to over one million endpoints and secures all connected assets through its multi-tenant and head/sub architecture. Infraray BICS connects devices from any manufacturer, which are managed via a central configuration management database.

Currently, Infraray is enhancing a number of product optimizations. The graphical user interface has been completely changed to a modern WebClient. Improved analysis of routing information allows network discovery via seed routers as well as exact detection of network boundaries for localization of edge devices. In the area of flow reporting, there are more detailed observation sets for industrial or predictable environments. Furthermore, network traffic can be monitored using deny/allow lists as well as automatically importing available compilations from command & control servers and alerting their usage.

Infraray's roadmap for 2023 includes features such as visualization of a Layer3 topology, path detection of communicating components, renewal and expansion of the administration GUI for self-management of the appliance (self-deployment: patches and software updates), expanded support for virtualized environments, and improvement of endpoint profiling.

More information and details about Infraray are available at https://www.infraray.com.

About Beta Systems

Beta Systems has been developing high-quality infrastructure software products for the secure and efficient processing of large volumes of data for the best possible fulfillment of all legal and business requirements for around 40 years. The multi-platform software solutions for z/OS, Unix, Linux and Windows environments automate, document and analyze business-bearing IT processes in data centers of large enterprises, IT service providers, public institutions and medium-sized businesses. Beta Systems' data center intelligence portfolio focuses on the areas of output management & archiving, log/security information management, workload automation and job management.

Beta Systems Software Aktiengesellschaft (BSS, ISIN DE000A2BPP88) was founded in 1983, is listed in the Scale segment of the German Stock Exchange and employs more than 660 people. The company is headquartered in Berlin. Beta Systems is active nationally and internationally with 22 wholly owned group companies and numerous partner companies. Worldwide, more than 1,300 customers in over 3,200 running installations in more than 30 countries optimize their processes and improve their security with products and solutions from Beta Systems. The company is one of the leading medium-sized and independent software solution providers in Europe and generates half of its sales internationally.
